Y	Y	Comes with free kitchen caddy
N	Y	Suitable to take food waste from a family of up to five people
Y	Y	
N	Y	Suitable for the larger family 6+
Y	Y	Entirely safe for you and your pets
Y	Y	Can be used with high water table
Y	Y	Keeps wheeile bins clean and free from smells
		Saves landfill
		Reduces Greenhouse gases

The Green Cone

The patented design ensures the almost total breakdown of all food waste into its natural components of water and carbon dioxide, thus producing minimal residue. The double-walled solar cone creates a heat trap of circulating air to encourage the growth of harmless bacteria and also helps to insulate the waste in winter. With the digestion chamber below ground level there are no smells and worms and natural soil organisms can migrate freely in and out of the basket.

Height (above ground) 70cm
 Depth (below ground) 42cm
 Diameter of lid 28cm
 Diameter (top of basket) 59cm

The Green Johanna

The Green Johanna is not a simple traditional composter. Through innovative design it can safely handle both garden and all food waste, producing an excellent quality compost. The unit has a base plate and the compost is easily accessed through two sliding doors. The Green Johanna ideally composts two parts food waste to one part of garden waste and can be supplied with a winter jacket to improve its performance in very cold weather.

Height 94cm
 Diameter of lid 53cm
 Diameter of base 81cm
