music to the power of YOU

# eco media player

revolution

The Next Generation range is entirely powered by windup technology. By doing away with the need for replacement batteries that would otherwise go to landfill sites, the Next Generation range makes a significant contribution to the environment and the carbon footprint of personal consumer devices.

The Eco Media Player *revolution*™ is a feature-rich gadget of the highest standard.

Personally energise this amazing little pocket device, and it will reward you with 24-bit Hi Fidelity playback of all the major music formats including Apple® AAC, Microsoft® WMA, mp3, and OGG Vorbis.

Organise your Playlists as you wish, by Favourites / Artists / Albums / Genre etc.

Movie playback supports MP4 (H.264) and Windows® WMV formats, for superb, glitch-free personal enjoyment of all those great music-vids and feature films.

The internal 4Gb or 8Gb memory can hold up to 2,000 or 4,000 songs respectively - and if that's not enough, there's an SD card slot too!

Want to keep up to date whilst on the move? the *revolution*™ even includes a quality stereo FM radio, and you can record your favourite shows to enjoy later.

With built-in photo album support you can take your cherished pictures around with you - and even set up a slide-show, zoom in and pan around.

OK, so you've got a long bus ride ahead? Why not load up a few novels to read on the super clear text display - you can even save a bookmark so you can pick up where you left off...

...and if you prefer someone else to read for you, audio books from **AUDIBLE®** are supported.

...and if your mobile phone dies, *revolution*™ can crank it up for that vital call.

Enjoy all your media, anytime, anyplace!
